1. Application

In this application, the user shakes the device and takes a picture. All the pictures are stored in the device.

2. Objectives

The objectives of this assignment are:

- Learn more about the camera.
- Learn more about motion sensors.
- Save and store files in the device.

3. Review

Make sure to go through the related material from the course website, especially the following

- Camera
- File System

4. Assignment Specifications

Build an application that the user takes a picture by shaking the device.

The app should work as follows:

- There should be (at least) two main buttons: Take a Photo and Browse Photos
- **Take a Photo**
  - This will open the camera.
  - When the user wants to take a picture, she/ he starts shaking the device. The application takes a picture one second after the shaking stops.
  - Each picture is saved and stored in the device.
- **Browse Photos**
  - The user can see all the pictures stored in the device and have been captured **only** by the application.
  - The user can delete a picture.

5. Marking

The marking scheme of this assignment is as follows:

- 8/10 marks are assigned to meeting the above specifications
- 2/10 will be based on the quality of the User Interface and User Experience

6. Submission

Submit your work through Dropbox at the course website.

1. A zip file containing your final Android application file (.apk) and all the necessary files of your project.
2. Name your zip file with your First and Last name as A3FirstLast.zip
3. Submit your file by **Sunday, Nov. 15th, at 11:59 pm**
